Education

BSc in Computer Science & Honours BBA Double-Degree | GPA: 3.8

Sep. 2023 – Apr. 2028

Wilfrid Laurier University

Waterloo, ON

- Relevant Courses: Data Structures & Algorithms, Operating Systems, Algorithm Analysis, Object-Oriented Programming

Experience

Software Engineer Intern

May 2026 – Present

RBC

Toronto, ON

- Working on full-stack development on the Security team using **Java**, **JavaScript**, **React**, and **Spring Boot**.

Software Engineer Intern

Jan. 2026 – Apr. 2026

Manulife

Toronto, ON

- Reduced onboarding ramp-up time by **40%** by building an internal AI chatbot with a **RAG pipeline** and **vector database** to automate access requests and surface setup documentation through **Microsoft Copilot Studio**.
- Diminished invalid API requests by **35%**, measured through backend error logs, by building **FastAPI** endpoints and configuring **Azure Cosmos DB** containers for structured data retrieval, request logging, and validation testing.
- Lowered post-deployment defects by **45%**, measured via Jira ticket volume across release cycles, by automating build and deployment workflows using **Jenkins CI/CD** and validating API endpoints with **Postman** before production.

Research Assistant

Sep. 2025 – Dec. 2025

Wilfrid Laurier University

Waterloo, ON

- Reduced model experimentation time by **25%**, measured by time to prepare training-ready datasets, by building **Python** data pipelines that automated data ingestion, cleaning, and formatting for **deep learning** and **Large Language Model** research.
- Built a unified data pipeline to integrate **10+** transportation datasets from APIs, web sources, and **PostgreSQL**, enabling consistent feature extraction and analysis for **machine learning** workflows.
- Improved training data quality by **20%**, measured by reduction in missing and duplicate records, by validating and cleaning **500K+** entries using **Pandas** and **NumPy** through standardization, imputation, and deduplication.

Software Engineer Intern

Jan. 2024 – Apr. 2024

Riipen

Toronto, ON

- Architected and optimized **RESTful APIs** using **Node.js** and **Express**, implementing **Redis** caching and efficient data access patterns to reduce average response times by **35%** and support higher concurrent user load.
- Created a **GitHub Actions CI/CD** workflow to automate testing and **Docker** image builds for backend services, reducing manual deployment steps by **50%** and improving consistency across development environments.
- Owned key **React** frontend features end to end, integrating reusable components with backend APIs and collaborating through **Agile** sprints, Jira tickets, daily standups, and Slack to ship production-ready updates across multiple releases.

Projects

Maboko Cash  | *Next.js, React, TypeScript, NestJS, PostgreSQL, TypeORM, Socket.io*

- Launched a full-stack fintech platform for the DRC with a **NestJS** backend spanning **15+ modules** — wallets, ledger, transactions, FX, mobile money, USSD, marketplace, and referrals — backed by **PostgreSQL** with **TypeORM** migrations.
- Implemented a **CDF-primary** multi-currency conversion pipeline with real-time updates via **Socket.io**, and implemented **Passport/JWT** auth, rate limiting, KYC/AML modeling, and **Google Cloud Translation** for multilingual support.

Cortex – HackCanada Finalist   | *React, Next.js, TypeScript, Three.js, FastAPI, Python, Google Gemini*

- Built Cortex, a full-stack AI system that ingests **GitHub repositories**, PDFs, and raw text, then scores technical proficiency across 51 computer science categories using a **FastAPI** pipeline with **Google Gemini**.
- Engineered a profile aggregation workflow that merged multi-source skill evidence over time using **EMA-based weighting**, allowing stronger sources such as GitHub repositories to influence persistent user profiles more heavily than text submissions.
- Developed an interactive **Next.js** and **Three.js** frontend that mapped skill categories into animated brain regions, and integrated a chatbot that generated SWOT analyses, learning paths, and skill-gap insights from each user's profile data.

Technical Skills

Languages: Python, C++, SQL, Java, JavaScript, TypeScript, C, C#

Frameworks & Libraries: Spring Boot, Node.js, Flask, FastAPI, Express, React, Next.js, Tailwind

Cloud & Databases: Azure, AWS, GCP, Redis, PostgreSQL, MongoDB, MySQL, DynamoDB

Tools: Git, Docker, Unix/Linux, Jenkins, Postman, Jira, Confluence

Certifications: AWS Cloud Practitioner, Microsoft AZ900, Fortinet FCF, J.P. Morgan Software Engineering
